

SUPERVISED LEARNING FOR GENRE CLASSIFICATION OF AUDIO TRACKS

Author: Angel Bergantiños Yeste

Director: Dr. Sergio Escalera Guerrero

Department of Applied Mathematics and Analysis

Context and motivation

History

Telephones were the first to transmit audio through electricity

Thomas Stockham with the first digital recorder (1976)

First iPod released by Apple in 2001

State of the art

MFCC to extract information of a song's frequencies

Deep learning techniques are being used in bigger studies

Method whole overview

RAW SONG

MFCC

HISTOGRAMS

PCA

LEARNING

GENRE

Method: MFCC

Mel Scale

$$m = 2595 \cdot \log_{10} \left(1 + \frac{F}{7000} \right)$$

Method: MFCC

Discrete Cosine Transform:

$$C_n = \sum_{k=1}^k (\log D_k) \cos \left[m(k - \frac{1}{2}) \frac{\pi}{k} \right]$$

Resulting matrix:

Each row represents the Coefficients of one frame

Each column represents one Extracted Coefficient

Method: PCA and Feature representation

Naive representation

Every frame is concatenated after another.

[Frame₁][Frame₂]...[Frame_N]

Where each Frame has as many values as MFCC.

Frame1 = [MFCC₁, ..., MFCC_M]

Histogram representation

Each histogram is formed with the MFCC of every frame.

And then, concatenate all histograms.

[Hist₁][Hist₂]...[Hist_M]

Method: PCA and Feature representation

Naive: $[\text{Frame}_1][\text{Frame}_2] \dots [\text{Frame}_N]$

Histogram: $[\text{Hist}_1][\text{Hist}_2] \dots [\text{Hist}_M]$

Method: learning schemes

Support Vector Machine

Different kernels:

- Rbf
- Linear
- Poly
- Sigmoid

Results: Data

Marsyas dataset: http://marsyasweb.appspot.com/download/data_sets/

Genres

Blues	Jazz
Classical	Metal
Country	Pop
Disco	Reggae
Hip hop	Rock

Properties

- **Sample rate:** 22050Hz
- **Channels:** 1 (Mono)
- **Frame rate:** 22050 fps

Results: Evaluation protocol and method parameters.

Confusion matrix

Gamma and C parameters

Results: Naive

25. feature 1 (0.007354)
```

Results: Extra

AdaBoost: Worse performance (18%)

Naïve-Bayes: Lower accuracy, but similar to SVC default results (56%)

Conclussion and future work

Bigger is better: with more songs, we can learn better.

With a bigger dataset, deep learning can work better and allows the creation of a more accurate model.

Other features of music can be also used as input to work with the frequency for further audio analysis.

Thanks for your attention!
